Short Description

LM339N LM339 Low Power Quad Voltage Comparators New IC

Beskrivelse

Description:

The LM339 devices consist of four independent voltage comparators that are designed to operate from a single power supply over a wide range of voltages. Operation from dual supplies also is possible, as long as the difference between the two supplies is 2 V to 36 V, and V_{CC} is at least 1.5 V more positive than the input common-mode voltage. Current drain is independent of the supply voltage. The outputs can be connected to other open-collector outputs to achieve wired-AND relationships.

Included:

- 5 x LM339N

This item features:

- Wide Supply Ranges
